Automating Frame and Alert Interactions with Text Verification

Learning Objective:

Learn to automate interactions with frames, alerts, and verify text based on actions using Playwright.

Details:

Automate interactions with frames, trigger alerts, and verify the displayed text based on actions using Playwright on the given application.

Precondition:

- Initialize Playwright.
- Launch the Chromium browser.
- Create a new browser context and page.
- Load the URL: https://www.w3schools.com/js/tryit.asp?filename=tryjs_prompt
- Maximize the browser window using an appropriate viewport configuration.
- Identify the iframe containing the "Try It" button.
- Use Playwright's frame handling methods to interact with elements inside the iframe.

Requirements:

1. Navigate to the given URL.
2. Identify the iframe containing the JavaScript code and "Try It" button.
3. Switch to/interact with the iframe using Playwright.
4. Click the "Try It" button inside the iframe.
5. Handle the prompt dialog using Playwright's dialog event.
6. Enter a name in the prompt.
7. Perform the required action:

 Accept the prompt and verify the displayed text.

 OR dismiss the prompt and verify the displayed text.
8. Use conditional statements to verify the text based on the action performed.

Hints to Solve:

- **page.frameLocator()** – to interact with elements inside an iframe
- **page.locator()** – to locate elements
- **locator.click()** – to click an element
- **page.on("dialog")** – to handle JavaScript dialogs
- **dialog.accept()** – to accept the prompt
- **dialog.dismiss()** – to cancel/dismiss the prompt
- **dialog.message()** – to retrieve the alert/prompt message
- **dialog.type()** – to identify the dialog type
- **expect(locator).toHaveText()** – to verify the displayed text
- **Conditional statements such as if/else** – to verify different outcomes

Expected Outcome:

- Automate interactions with iframes using Playwright.
- Handle JavaScript prompt dialogs using Playwright.
- Accept and dismiss dialogs.
- Enter values into a prompt dialog.
- Verify the text displayed after the dialog action.
- Use conditional statements to validate different outcomes.
- Understand the difference between Selenium's `switchTo().frame()` and Playwright's `frameLocator()`.

Reference Concepts:

- Playwright Frames
- Playwright Dialogs
- `frameLocator()`
- `page.on("dialog")`
- `dialog.accept()`
- `dialog.dismiss()`
- Text verification using Playwright assertions
